# Using the Map: General Navigation

Map navigation is similar to other online maps. You can zoom, pan across the map, or search for a specific location or feature.

**Desktop** – Zoom with the scroll wheel. Click and drag to pan the map. Click a feature to select it and view more information (such as a parcel).

**Mobile** – Zoom using the standard pinch mechanics. Drag your finger to move the map. Tap the screen to select a feature and view more information if available.

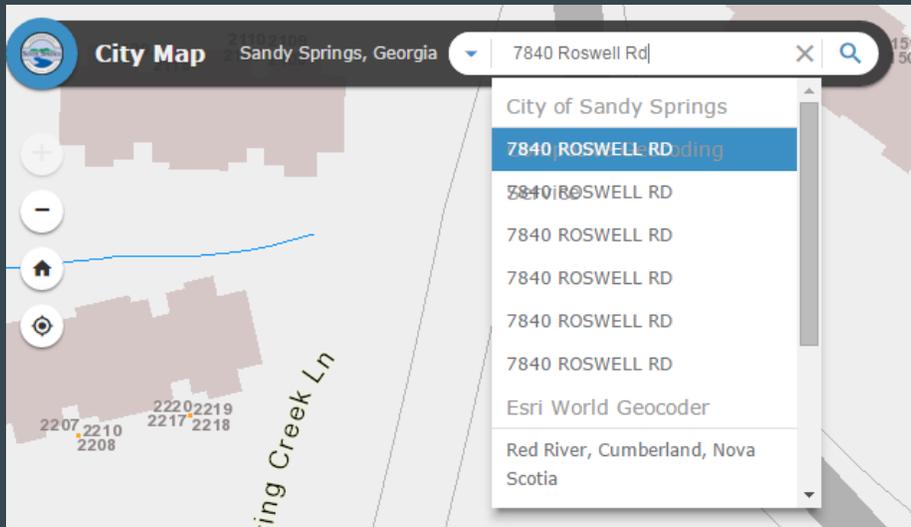

📍 Use the “My Location” tool to zoom to your location.

[Back to Tool List](#)

# Tools

## Address Lookup

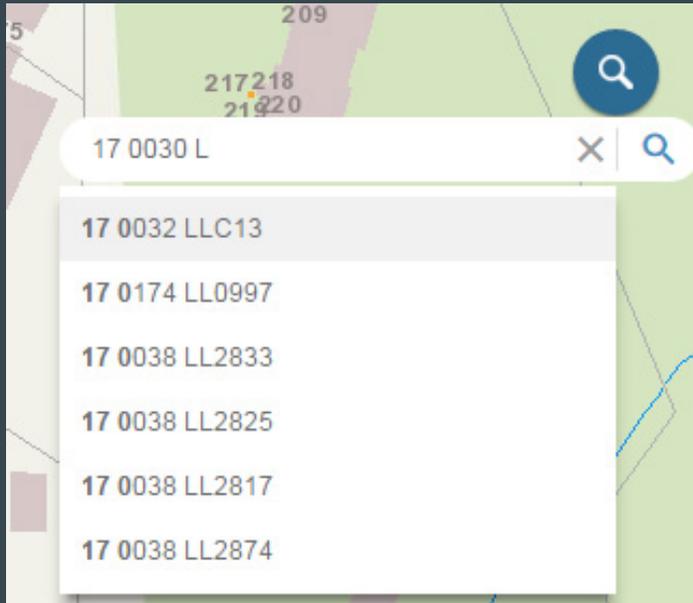

Search for an address and select a result from a list of suggestions. Hit enter to zoom to the top choice.

Example: “7840 Roswell Rd”

The search will attempt to first use the City of Sandy Springs data, but will then try on a worldwide dataset such as “Nova Scotia” indicated above.

[Back to Tool List](#)

# Parcel Lookup

Search for Fulton County parcels.

Select the parcel from the drop-down list or hit enter.

**Parcel search *MUST* have two spaces before “LL.”**

These spaces are due to source data.

Example: “17 \_ 0032 \_ \_ LLC13”

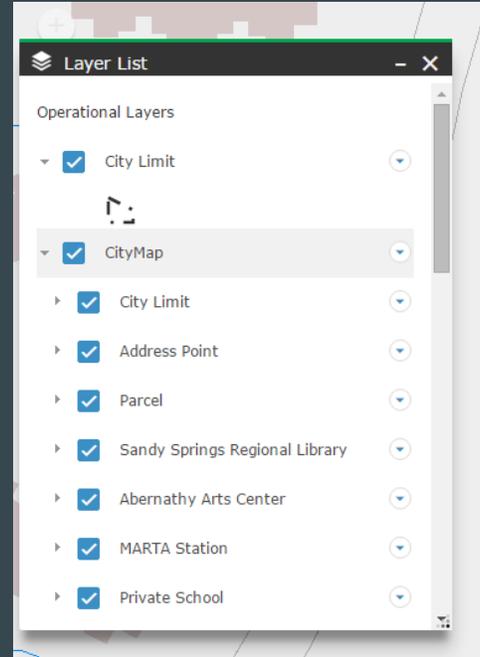

[Back to Tool List](#)

# Layer Control

Open the list of data layers.

Click the layer name to see more information or to open the layer group.

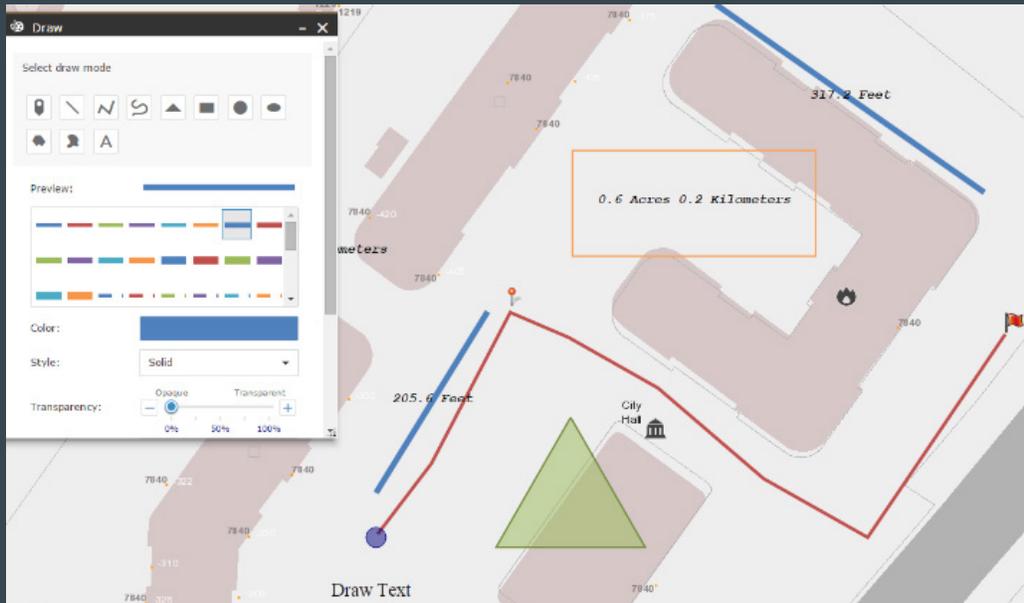

**Mark the check box to turn the layer on/off.**

Scroll down to see all the layers available.

Turn on or off additional layers as needed.

[Back to Tool List](#)

# Draw

Use this to **draw mock-ups on the map**. These will also show up on any maps made with the [Print](#) tool during this session.

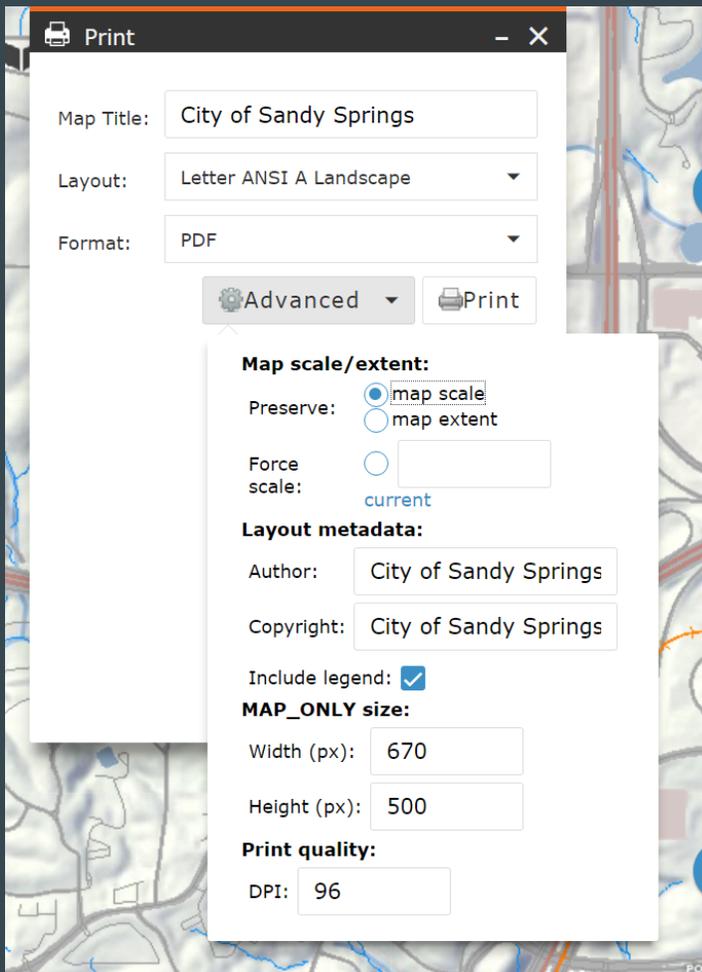

1. Select the draw item (point, line, shape).
2. Select the style (color, size).
3. Follow onscreen instructions to place the feature. Click the map to place point features or click-and-drag for lines and shapes.
